	Background: GHRH-R is a seven transmembrane domain protein that localizes to the
	somatotroph of the pituitary. GHRH-R plays an important role in growth and acts as a high-
	affinity receptor for GHRH. Binding of GHRH leads to the coupling of GHRH-R to G-protein
	which stimulates increased adenylyl cyclase activity and the accumulation of cAMP leading to
	the synthesis and release of growth hormone and somatotroph proliferation. In addition, this
	signalling pathway may have direct action in fetal/placental development, reproduction and
	immune function. GHRH and GHRH-R may also play a role in the regulation of non-rapid eye
	movement sleep (NREMS). The expression of GHRH-R is dependent on the presence of the
	POU domain factor Pit-1. Mutations in the gene encoding this protein can result in isolated
	growth hormone deficiency (IGHD), also known as Dwarfism of Sindh, and anterior pituitary
	hypoplasia (APH).
