Background:	Synonyms: FLJ22329, Glycosyltransferase 25 domain containing 1, Hydroxylysine

## Target Details

galactosyltransferase 1, Procollagen galactosyltransferase 1, GT251\_HUMAN.

Background: GLT25D1 is a 622 amino acid protein that localizes to the lumen of the endoplasmic reticulum. Ubiquitously expressed with higher levels in placenta, heart, lung and spleen, GLT25D1 is a member of the glycosyltransferase 25 family. The beta-galactosyltransferase activity of GLT25D1 allows the transfer of beta-galactose to hydroxylysine residues of collagen. GLT25D1 is considered an important target for investigating the biological significance of collagen glycosylation and the importance of posttranslational modification in the etiology of connective tissue disorders. The gene encoding GLT25D1 is located on human chromosome 19, which consists of over 63 million bases, houses approximately 1,400 genes and is recognized for having the greatest gene density of the human chromosomes.
