Target Details	
Background:	Synonyms: BEND8, BTB Domain Containing 14B, BTB/POZ domain-containing protein 14B,
	btbd14b, btbd14b, FLJ37383, NAC-1, NAC1, Nacc1, NACC1_HUMAN, Nucleus accumbens-
	associated protein 1.
	Background: NAC1 is an N-terminal homodimerization domain that contains multiple copies of
	kelch repeats and/or C2H2-type zinc fingers. Proteins that contain BTB domains are thought to
	be involved in transcriptional regulation via control of chromatin structure and function.
	BTBD14B (BTB/POZ domain-containing protein 14B), also known as NACC1 (nucleus
	accumbens associated 1), BEND8 or NAC1, is a 527 amino acid protein that localizes to both
	the nucleus and the cytoplasm and contains one BTB (POZ) domain. Existing as a
	homooligomer that interacts with HDAC3 and HDAC4, BTBD14B functions as a transcriptional
	repressor that influences the transcriptional activity of CRIF1 and is required for proteasome
	recruitment to the nucleus and cytoplasm in dendritic spines. BTBD14B is overexpressed in
	multiple carcinomas, suggesting a role in tumor development and metastasis.
