ZNF575 (ZNF575 Products)

Target Details	
Background:	Synonyms: Zinc finger protein 575, ZN575_HUMAN, Znf575.
	Background: Zinc-finger proteins contain DNA-binding domains and have a wide variety of
	functions, most of which encompass some form of transcriptional activation or repression. The
	majority of zinc-finger proteins contain a Kr_ppel-type DNA binding domain and a KRAB
	domain, which is thought to interact with KAP1, thereby recruiting histone modifying proteins.
	Zinc finger protein 575 (ZNF575) is a 245 amino acid member of the Kr_ppel C2H2-type zinc-
	finger protein family. Localized to the nucleus, ZNF575 contains six C2H2-type zinc fingers
	through which it is thought to be involved in DNA-binding and transcriptional regulation.
