Target Details

Background:	Synonyms: CED 6, Cell death protein 6 homolog, Engulfment adapter protein, Engulfment adaptor PTB domain containing 1, GULP, GULP, engulfment adaptor PTB domain containing 1, GULP1, GULP1_HUMAN, Protein GULP, PTB domain adapter protein CED 6, PTB domain adapter protein CED-6, PTB domain adaptor protein CED6, PTB domain-containing engulfment adapter protein 1. Background: Several proteins involved in regulating and executing programmed cell death have been identified in <i>C. elegans</i>. CED-3, a member of the ICE protease/caspase family, and CED-4, a homolog of the mammalian Apaf-1, promote apoptosis. CED-9, a homolog of the mammalian Bcl-2 protein, inhibits cell death. EGL-1 and CED-6 both function as death-promoting proteins, with CED-6 playing a role in the engulfment of apoptotic cells. CED-5 and CED-7 are <i>C. elegans</i> orthologs of the mammalian DOCK180 and ABC transporter proteins, respectively, and also play a role in the engulfment of dying cells.
