| | Background: Rho GTPases play a fundamental role in numerous cellular processes that are |
| | initiated by extracellular stimuli that work through G protein coupled receptors. The encoded |
| | protein may form a complex with G proteins and stimulate Rho-dependent signals. A similar |
| | protein in rat interacts with glutamate transporter EAAT4 and modulates its glutamate |
| | transport activity. Expression of the rat protein induces the reorganization of the actin |
| | cytoskeleton and its overexpression induces the formation of membrane ruffling and filopodia. |
| | Two alternative transcripts encoding different isoforms have been described. [provided by |
| | RefSeq, Jul 2008]. |
| Pathways: | Neurotrophin Signaling Pathway, Regulation of G-Protein Coupled Receptor Protein Signaling |
