Target Details

Alternative Name:	Golgin subfamily A member 4/Golgin 245 (GOLGA4 Products)
Background:	<p>Synonyms: 256 kDa golgin, 72.1 protein, GCP2, GOGA4_HUMAN, GOLG, GOLGA4, golgi autoantigen, golgin subfamily a, 4, Golgin subfamily A member 4, golgin-240, Golgin-245, MU-RMS-40.18, OTTHUMP00000161363, OTTHUMP00000208897, OTTHUMP00000209805, p230, Protein 72.1, Trans-Golgi p230.</p> <p>Background: Golgin 245 is also known as p230, GCP2, GOLG or golgi autoantigen and is a 2,230 amino acid protein that is expressed as three isoforms. Golgin 245 is localized to the cytoplasm in cells and is a member of the golgin family, all of which are peripheral membrane proteins associated with the Golgi complex. Golgin 245 has a carboxyl-terminal GRIP domain, which attaches to the trans-Golgi network (TGN) and TGN-derived vesicles. It is thought that the interaction that takes place between golgin 245 and MACF1, which cross-links microtubules to the Actin cytoskeleton, allows proteins to be transported from the TGN to the cell periphery. against golgin 245 are associated with two chronic disorders known as Sjren's syndrome and Hepatitis B.</p>
