Target Details

Background:	Synonyms: DAP Kinase 2 phospho S318, p-DAP Kinase 2 phospho S318, Death associated protein kinase 2, DAK 2, DAK2, DAP kinase related protein 1, DAPK 2, DAPK2, Death associated protein kinase 2, DRP 1, DRP1, DRP-1, MGC119312, DAP kinase 2, DAP kinase related protein 1, DAP kinase related protein 1 beta isoform, DAP-kinase-related protein 1, DAPK 2, DAPK2, DAPK2_HUMAN, Death associated protein kinase 2, Death-associated protein kinase 2, DRP 1, DRP-1, DRP1, MGC119312. Background: Protein kinase termed (DAPK2) dependant on calcium/calmodulin (Ca²⁺/CaM) contains an N-terminal protein kinase domain followed by a conserved CaM-binding domain with significant homologies to those of DAP kinase, a protein kinase involved in apoptosis. Overexpression of DAPK2 significantly induced the morphological changes characteristic of apoptosis. Results indicate that DAPK2 is an additional member of DAP kinase family involved in apoptotic signaling.
