Target Details Background:	Synonyms: C1orf69, CA069_HUMAN, CAF17_HUMAN, FLJ12734, FLJ13849, IBA57, IBA57 iron sulfur cluster assembly homolog, IBA57 iron sulfur cluster assembly homolog S. cerevisiae, Iron sulfur cluster assembly factor for biotin synthase and aconitase like, Iron-sulfur cluster assembly factor homolog, mitochondrial, Mitochondrial proteins with a mass of 57 kDa, Putative transferase C1orf69, Putative transferase C1orf69 mitochondrial, Putative transferase CAF17, mitochondrial. Background: Belonging to the CAF17 subfamily of the gcvT family, C1orf69 is a 356 amino acid mitochondrial protein that is required for normal heme synthesis. Heme synthesis is dependent upon receiving iron through iron sulfur (Fe-S) cluster biogenesis proteins such as C1orf69, which is specifically thought to assemble Fe-S clusters for mitochondrial aconitase and lipoate synthase. In zebrafish, deficiency of C1orf69 causes anemia. The gene encoding C1orf69 maps to human chromosome 1, the largest human chromosome spanning about 260 million base pairs and making up 8 % of the human genome. There are also a large number of diseases	
	associated with chromosome 1.
