Background:	Synonyms: CWC22, CWC22 spliceosome associated protein homolog S. cerevisiae, CWC22	
Daonyi Vuriu.	spliceosome associated protein homolog, CWC22_HUMAN, E4GL, fSAPb, Functional	
	spliceosome associated protein b, KIAA1604, NCM, Nucampholin homolog, Pre-mRNA-splicing	
	factor CWC22 homolog.	
	Background: Spliceosomes are multi-protein complexes that are composed of snRNPs (small	
	nuclear ribonucleoproteins) and a variety of associated protein factors, all of which work in	
	concert to regulate the splicing of pre-mRNA, a critical step in the post-transcriptional	
	regulation of gene expression. CWC22 (CWC22 spliceosome-associated protein), also known	
	as NCM, fSAPb or EIF4GL, is a 908 amino acid nuclear protein and component of the	
	spliceosome C complex. CWC22 is associated with the spliceosome prior to catalytic steps and	
	remains associated throughout the reaction. Belonging to the CWC22 family, CW22 contains	
	one MI domain and a MIF4G domain. The gene encoding CWC22 maps to human chromosome	
	2q31.3. As the second largest human chromosome, chromosome 2 makes up approximately	
	8 % of the human genome and contains 237 million bases encoding over 1,400 genes.	
Gene ID:	57703
