Target Details

Background: Synonyms: DAPP1 phospho Y139, p-DAPP1 phospho Y139, B cell adapter molecule of 32 kDa, B lymphocyte adapter protein Bam32, B-cell adapter molecule of 32 kDa, BAM32, DAPP1, DAPP1_HUMAN, DKFZp667E0716, Dual adapter for phosphotyrosine and 3-phosphotyrosine and 3-phosphoinositide, Dual adaptor of phosphotyrosine and 3 phosphoinositides, hDAPP1. Background: B cell adapter molecule is also designated dual adapter for phosphotyrosine and 3-phosphotyrosine and 3-phosphoinositide (DAPP1) or B lymphocyte adapter protein. BAM32 is a B cell-associated adapter that is crucial for B cell antigen receptor signaling regulation. BAM32 interacts with PtdIns and PLC g2 and, upon B cell activation, the protein is phosphorylated on tyrosine residues. It is a mainly cytoplasmic protein that can translocate to the cell membrane after cell stimulation. BAM32, which contains one PH domain and one SH2 domain, is primarily expressed in placenta and lung tissues, but can also be detected in heart, liver, pancreas and brain.
