Background:	Synonyms: MGC10895, SOX 7, SOX 7 transcription factor, sox7, SOX7 transcription factor,

	box 7, Transcription factor SOX 7, Transcription factor Sox-7, Transcription factor SOX7.		
	Background: Sox genes comprise a family of genes that are related to the mammalian sex		
	determining gene SRY. These genes similarly contain sequences that encode for the HMG-box		
	domain, which is responsible for the sequence-specific DNA-binding activity. Sox genes encode		
	putative transcriptional regulators implicated in the decision of cell fates during development		
	and the control of diverse developmental processes. The highly complex group of Sox genes		
	cluster at least 40 different loci that rapidly diverged in various animal lineages. At preser		
	Sox genes have been identified. Members of this family have been shown to be conserved		
	during evolution and to play key roles during animal development. Some are involved in human		
	diseases, including sex reversal.		
Gene ID:	83595		
UniProt:	Q9BT81		
Pathways:	Positive Regulation of Endopeptidase Activity
