Datasheet for ABIN1710672 anti-C1orf114 antibody (AA 101-200) (FITC)

-online.com antibodies

Overview

Quantity:	100 µL
	·
Target:	C1orf114 (CCDC181)
Binding Specificity:	AA 101-200
Reactivity:	Human, Mouse
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This C1orf114 antibody is conjugated to FITC
Application:	Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded
	Sections) (IF (p)), Western Blotting (WB)

Product Details

Immunogen:	KLH conjugated synthetic peptide derived from human C1orf114
Isotype:	lgG
Cross-Reactivity:	Human, Mouse
Predicted Reactivity:	Rat,Cow,Sheep,Pig,Horse,Rabbit
Purification:	Purified by Protein A.
Target Details	
Target:	C1orf114 (CCDC181)
Alternative Name:	C1orf114 (CCDC181 Products)

Synonyms: C1orf114, CA114_HUMAN, chromosome 1 open reading frame 114, RP1-206D15.2,
Uncharacterized protein C1orf114.
Background: Chromosome 1 is the largest human chromosome spanning about 260 million
base pairs and making up 8 % of the human genome. There are about 3,000 genes on
chromosome 1, and considering the great number of genes there are also a large number of
diseases associated with chromosome 1. Notably, the rare aging disease Hutchinson-Gilford
progeria is associated with the LMNA gene which encodes lamin A. When defective, the LMNA
gene product can build up in the nucleus and cause characteristic nuclear blebs. The
mechanism of rapidly enhanced aging is unclear and is a topic of continuing exploration. The
MUTYH gene is located on chromosome 1 and is partially responsible for familial adenomatous
polyposis. Stickler syndrome, Parkinsons, Gaucher disease and Usher syndrome are also
associated with chromosome 1. A breakpoint has been identified in 1q which disrupts the
DISC1 gene and is linked to schizophrenia. Aberrations in chromosome 1 are found in a variety
of cancers including head and neck cancer, malignant melanoma and multiple myeloma. The
C1orf114 gene product has been provisionally designated C1orf114 pending further
characterization.
