## Target Details

---

subunit homolog, CLP1, cleavage and polyadenylation factor I subunit, homolog *S. cerevisiae*, CLP1, yeast, homolog of, CLP1\_HUMAN, hClp1, Homolog of yeast CFIA subunit Clp1p, Polynucleotide kinase Clp1, Pre mRNA cleavage complex II protein Clp1, Pre-mRNA cleavage complex II protein Clp1.

Background: HEAB is a 425 amino acid nuclear protein that belongs to the Clp1 family. Utilizing magnesium, manganese or nickel as cofactors, HEAB participates in the phosphorylation of the 5'-hydroxyl groups of double- and single- stranded RNA and DNA. HEAB is a member of the tRNA splicing endonuclease complex, in conjunction with TSEN2, TSEN15, TSEN34 and TSEN54, and is also a member of the pre-mRNA cleavage complex II. The gene encoding HEAB maps to human chromosome 11q12.1 and mouse chromosome 2 D, mutations to this gene may lead to a reduced pre-mRNA cleavage activity. HEAB exists as two isoforms due to alternative splicing events.
