Target Details

Background:	Synonyms: DKFZp434C211, DKFZp434J0911, FLJ14390, G protein coupled receptor 124, G-protein coupled receptor 124, GP124_HUMAN, GPR 124, GPR124, KIAA1531, TEM 5, TEM5, Tumor endothelial marker 5, Tumor endothelial marker 5 precursor, GPCR GPR124, Adhesion G protein-coupled receptor A2, ADGRA2. Background: Tumor endothelial markers (TEMs) are abundantly expressed in the blood vessels of human solid tumors during angiogenesis and neoangiogenesis. These include TEM1 (endosialin), TEM5 (G-protein coupled receptor 124) and TEM7 (plexin domain containing 1). TEMs are associated with the cell surface membrane at low levels in normal human and mouse tissues. TEM5 is a seven-pass transmembrane receptor, whereas TEM1, TEM7 and TEM8 span the membrane once. TEM5 expression is elevated during tumor angiogenesis and neoangiogenesis. TEM7 is highly expressed in tumor endothelium and neurons. Therefore, TEM5 and TEM7 may be suitable targets for the development of antiangiogenic therapies.
