Target Details	
Background:	Synonyms: cation channel sperm-associated protein 3, calcium channel repeat containing 1,
	putative ion channel CatSper3, cav-like protein, one-repeat calcium channel-like protein,
	CATSPER3, CACRC, Cav-like protein, CACRC, Cation channel, sperm associated 3,
	CTSR3_HUMAN, putative ion channel CatSper3.
	Background: CatSpers (cation channel, sperm associated proteins) are ion transport proteins
	located on the surface of sperm cells in the principal piece of the sperm tail. CatSpers are vital
	to sperm motility, fertilization and cAMP-mediated calcium influx in sperm. There are four
	CatSper proteins in mammalian sperm, namely CatSper (or CatSper1), CatSper2, CatSper3 and
	CatSper4. CatSper proteins contain a single, six-transmembrane-spanning segment and exhibit
	the voltage-dependent Ca2+ channel four-repeat structure. CatSper proteins are believed to
	assemble into a heterotetrameric complex, forming an alkalinization-activated Ca2+-selective
	channel. Mutations in any of the genes encoding CatSper family proteins can result in male
	infertility. CatSper3 plays an important role in the hyperactivated motility of sperm cells, a
	process that is required in the preparation of sperm for fertilization.
