Alternative Name:	GOLGA7 (GOLGA7 Products)
Background:	Synonyms: GCP 16, GCP16, GOLGA 7, GOLGA3AP1, GOLGA7A, Golgi autoantigen golgin
	subfamily a 7, Golgi complex associated protein of 16 kDa, Golgin A7, Golgin subfamily A
	member 7, HSPC041, MGC21096, MGC4876, GOGA7_HUMAN.
	Background: GOLGA7 is a multi-pass membrane protein belonging to the Erf4 family of
	proteins. It is the functional ortholog of the yeast Erf4 protein. Localizing to the Golgi apparatus,
	GOLGA7 is a widely expressed protein but its expression is absent from colon and thymus
	tissues. GOLGA7 is palmitoylated on two cysteine residues, and this palmitoylation is required
	for its interaction with golgin 160 and its Golgi-localization. GOLGA7 also forms a complex with
	ZDHHC9 and, together, these proteins function as a Ras palmitoyltransferase (Ras PAT) which
	is required for palmitoylation of H-Ras and N-Ras proteins. The palmitoylation of Ras proteins is
	essential for the trafficking of Ras proteins from the Golgi to the plasma membrane, thus
	implicating GOLGA7 in protein transport from the Golgi to the cell surface.
