Target Details

Background:	Synonyms: I kappa B beta, I-kappa-B-beta, IkappaBbeta, IKB beta, IkB-B, IkB-beta, IKBB, IKBB_HUMAN, IkBbeta, NF kappa BIB, NF-kappa-B inhibitor beta, NF-kappa-BIB, Nfkbib, Thyroid receptor interacting protein 9, Thyroid receptor-interacting protein 9, TR interacting protein 9, TR-interacting protein 9, TRIP-9, TRIP9. Background: The protein encoded by this gene belongs to the NF-kappa-B inhibitor family, which inhibit NF-kappa-B by complexing with, and trapping it in the cytoplasm. Phosphorylation of serine residues on these proteins by kinases marks them for destruction via the ubiquitination pathway, thereby allowing activation of the NF-kappa-B, which translocates to the nucleus to function as a transcription factor. Alternatively spliced transcript variants have been found for this gene.[provided by RefSeq, Jul 2011].
Pathways:	NF-kappaB Signaling , Activation of Innate immune Response , Maintenance of Protein Location , Toll-Like Receptors Cascades
