Target Details	
Alternative Name:	GNPDA1 (GNPDA1 Products)
Background:	Synonyms: EC 3.5.99.6, GlcN6P deaminase 1, Glucosamine 6 phosphate deaminase 1,
	Glucosamine 6 phosphate isomerase 1, Glucosamine-6-phosphate deaminase 1, Glucosamine-
	6-phosphate isomerase 1, GNPDA 1, GNPDA1, GNPI, GNPI1_HUMAN, HLN, KIAA0060, Oscillin,
	Putative glucosamine 6 phosphate isomerase.
	Background: During fertilization in mammals, the sperm activates the egg by causing an
	increase in the level of free cytoplasmic calcium concentration. This increased calcium
	concentration induces a characteristic series of oscillations that trigger egg activation and early
	embryo development. A hamster protein named oscillin is thought to be involved in this
	pathway. The enzyme glucosamine-6-phosphate isomerase (GNPI) or deaminase (GNPDA1)
	and the related protein GNPDA2 are the human homologs of hamster oscillin. GNPDA1 and
	GNPDA2 catalyze the conversion of GNP to fructose-6-phosphate and ammonia. Both proteins
	exist as homohexamers and are ubiquitously expressed with highest expression in testis, ovary
	and heart. Three isoforms of GNPDA2 are expressed due to alternative splicing events.
