Target Details		
Background:	Synonyms: HIRA-interacting protein 3, HIRIP3, HIRA interacting protein 3, HIRP3,	
	HIRP3_HUMAN.	
	Background: The HIRA protein shares sequence similarity with Hir1p and Hir2p, the two	
	corepressors of histone gene transcription characterized in the yeast, Saccharomyces	
	cerevisiae. The structural features of the HIRA protein suggest that it may function as part of a	
	multiprotein complex. Several cDNAs encoding HIRA-interacting proteins, or HIRIPs, have been	
	identified. In vitro, the protein encoded by this gene binds HIRA, as well as H2B and H3 core	
	histones, indicating that a complex containing HIRA-HIRIP3 could function in some aspects of	
	chromatin and histone metabolism. Alternatively spliced transcript variants encoding distinct	
	isoforms have been found for this gene.[provided by RefSeq, Aug 2011].
