Target Details

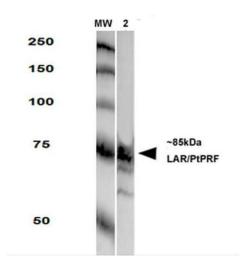

Target:	PTPRF		
Alternative Name:	LAR (PTPRF Products)		
Background:	PTPRF or leukocyte common antigen-related protein (LAR) is a widely expressed protein		
	tyrosine phosphatase with an extracellular receptor region that resembles a cell adhesion		
	molecule. PTPRF removes phosphate group from β -catenin, an event that may subsequently		
	facilitate cell-cell adhesion and ensure the stability of the cadherin complex. This phosphatase		
	has also been implicated in various cellular processes such as neurite growth, nerve		
	regeneration, actin remodeling and regulation of insulin function (1,2,3,4). Anti-PTPRF (C-		
	terminal) antibody is specific for the extracellular and cytoplasmic subunits of human PTPRF		
	(approx. 210, 150 and 85 kDa). Detection of the PTPRF bands by immunoblotting is specifically		
	inhibited by the immunizing peptide.		
Gene ID:	5792		
UniProt:	P10586		
Pathways:	EGFR Signaling Pathway		
Application Details			
Application Notes:	• WB (1:1000)		
	optimal dilutions for assays should be determined by the user.		
Comment:	1 μg/ml of ABIN1740992 was sufficient for detection of LAR/PTPRF in 20 μg of rat brain lysate		
	by colorimetric immunoblot analysis using Goat anti-mouse IgG:HRP as the secondary		
	antibody.
