# Target Details

| Target:             | VDAC1  |
|---------------------|--|
| Alternative Name:   | VDAC1 (VDAC1 Products)   |
| Background:         | Voltage-dependent anion-selective channel protein 1 (also known as VDAC, VDAC1 or outer mitochondrial membrane protein porin 1) is the the outer mitochondrial membrane receptor for hexokinase and BCL2L1. VDAC forms a channel through the mitochondrial membrane and is involved in small molecule diffusion, cell volume regulation and apoptosis. VDAC may participate in the formation of the permeability transition pore complex (PTPC), which is responsible for the release of mitochondrial products that triggers apoptosis. |
| Gene ID:            | 7416   |
| UniProt:            | P21796   |
| Application Details |  |
| Application Notes:  | <ul><li>WB (1:1000)</li><li>optimal dilutions for assays should be determined by the user.</li></ul>   |
| Comment:            | 1 μg/ml of ABIN1741224 was sufficient for detection of VDAC1 in 20 μg of rat brain lysate by colorimetric immunoblot analysis using Goat anti-mouse IgG:HRP as the secondary antibody.   |
