Target Details

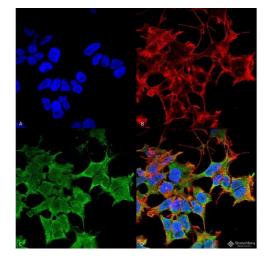

Target:	LGI1	
Alternative Name:	LGI1 (LGI1 Products)	
Background:	The leucine-rich, glioma inactivated gene 1 (LGI1) was first identified as a candidate tumor	
	suppressor gene for glioma and may play a role in other cancers. LGI1 is a member of a family	
	of highly related proteins containing leucine-rich repeats (LRRs) which are highly similar to	
	other transmembrane signaling molecules and receptors. LGI1 serves as a ligand to ADAM22, a	
	metalloprotease localized at the synapse. Mutations in LGI1 account for nearly half of	
	autodominant lateral temporal epilepsy (ADTLE), an epileptic syndrome characterized by focal	
	seizures with predominant auditory symptoms. Two isoforms of LGI1 are known to exist, this	
	LGI1 antibody will recognize only the longer form.	
Gene ID:	56839	
NCBI Accession:	NP_064674	
UniProt:	Q9JIA1	
Application Details		
Application Notes:	• WB (1:1000)	
	 optimal dilutions for assays should be determined by the user. 	
Comment:	1 $\mu\text{g}/\text{m}\text{l}$ of ABIN1741284 was sufficient for detection of LGI1 in 20 μg of rat brain lysate by	
	colorimetric immunoblot analysis using Goat anti-mouse IgG:HRP as the secondary antibody.	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid
