### Target Details

Target:	Neuroligin 1 (NLGN1)	
Alternative Name:	Neuroligin 1 (NLGN1 Products)	
Background:	Neuroligin-1 is a neuronal cell surface protein belonging to the type-B carboxylesterase/lipase	
	family. It is a necessary component in the maturation of excitatory synapses for their normal,	
	functional development, and is necessary to the regulation of synaptic plasticity and the	
	development of long-term memory within the adult amygdala in mammals. It is believed to	
	participate in cell-cell-interaction through the assembly of intracellular junction by the binding o	
	beta-neurexins, and may also be a factor in the maintenance and assembly of synaptic	
	junctions. It is also thought to have involvement in excitatory synaptic specification. Within	
	brain tissue, Neuroligin-1 is primarily observed in neurons and spinal cord.	
Gene ID:	116647	
UniProt:	Q62765	
Pathways:	Synaptic Membrane, Synaptic Vesicle Exocytosis	
Application Details		
Application Notes:	• WB (1:1000)	
	• ICC/IF (1:100)	
	optimal dilutions for assays should be determined by the user.	
Comment:	$2\mu g/ml$ of ABIN1741314 was sufficient for detection of Neuroligin-1 in 20 $\mu g$ of rat brain lysate	
	by colorimetric immunoblot analysis using Goat anti-mouse IgG:HRP as the secondary	
	antibody.
