Specificity:	Detects ~36-38 kDa.
Cross-Reactivity:	Human, Mouse, Rat
Purification:	Protein G Purified

Target Details	
Target:	QKI
Alternative Name:	QKI (QKI Products)
Background:	QKI is also called Protein Quaking or HqkI. QKI is an RNA-binding protein that plays a central role in myelinization. QKI acts by regulating pre-mRNA splicing, mRNA export, mRNA stability and protein translation, and is itself, regulated by alternative splicing. QKI is expressed in the frontal cortex of brain, but is shown to be down-regulated in the brain of schizophrenic patients.
Gene ID:	9444
UniProt:	Q96PU8
Application Details	
Application Notes:	 WB (1:1000) optimal dilutions for assays should be determined by the user.
Comment:	1 μg/ml of ABIN1741387 was sufficient for detection of Pan-QKI in 20 μg of rat brain lysate by colorimetric immunoblot analysis using Goat anti-mouse IgG:HRP as the secondary antibody.
