## Target Details

Target:	Ataxin 1 (ATXN1)
Alternative Name:	Ataxin 1 (ATXN1 Products)
Background:	Ataxin-1 is a member of the ATXN1 protein family and contains a single AXH domain. It is a
	neurodegenerative disorder protein thought to have a role in the metabolism of RNA as it has
	been shown to localize to the RNA and transcription dependent inclusions within the nucleus. $m{A}$
	mutation of Ataxin-1 is the cause of spinocerebellar ataxia type-1 (SCA1), a progressive,
	neurodegenerative disease that is autosomal dominant and primarily affects the Purjinke cells
	found in brain stem neuronal populations and the cerebellum. Expression of Ataxin-1 is almost
	ubiquitous, except in the brain where it is isolated to populations of neurons.
