Overview	
Quantity:	100 μL
Target:	GABRA2
Binding Specificity:	AA 29-37
Reactivity:	Human, Mouse, Rat
Host:	Guinea Pig
Clonality:	Polyclonal
Application:	Western Blotting (WB), Immunocytochemistry (ICC), Immunoprecipitation (IP)
Product Details	
Immunogen:	Synthetic peptide (aa 29-37 of rat GABA-A receptor alpha2 precursor protein) coupled to key-
	hole limpet hemocyanin via an added C-terminal cysteine residue.
Specificity:	Specific for GABA-A receptor alpha2.
Purification:	antiserum
Target Details	
Target:	GABRA2
Alternative Name:	GABA-A Receptor Alpha2 (GABRA2 Products)
Background:	Synonyms: GABA(A) R alpha2

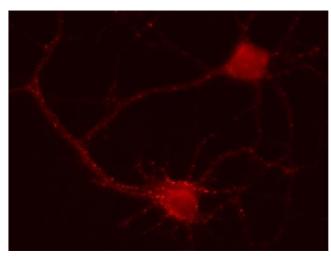

Application Details

Application Notes:	WB: 1 : 1000 (AP staining)
	ICC: 1: 200 up to 1: 500
	IHC: not tested yet
Comment:	WB: This protein aggregates after boiling, making it necessary to run SDS-PAGE with non-boiled
	samples. ICC: This antibody is suitable for the surface staining of living cells. After washing
	cells with bound antibodies, they can be fixed and visualized with secondary reagents.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	PBS
Handling Advice:	Crude antisera are more robust than monoclonals. With anti-microbials added, they may be
	stored at 4 °C.
	Serum does not contain active proteases, in fact, serum itself contains a powerful cocktail of
	protease inhibitors. Frozen storage (-20 °C),however, is preferable.
Storage:	4 °C/-20 °C
Storage Comment:	Unlabeled antibodies are stable in this form without loss of quality at ambient temperatures for
	several weeks or even months. They can be stored at 4 °C for several years.
