rarget Details	
Alternative Name:	MAPK1 (MAPK1 Products)
Background:	MAPK1 is a member of the MAP kinase family. MAP kinases, also known as extracellular signal regulated kinases (ERKs), act as an integration point for multiple biochemical signals, and are involved in a wide variety of cellular processes such as proliferation, differentiation, transcription regulation and development. The activation of this kinase requires its phosphorylation by upstream kinases. Upon activation, this kinase translocates to the nucleus of the stimulated cells, where it phosphorylates nuclear targets.

#### **Western Blotting**

Image 2. PK1 Antibody (C-term) (ABIN1882175 and ABIN2841383) western blot analysis in Hela cell line lysates (35  $\mu$ g/lane).This demonstrates the PK1 antibody detected the PK1 protein (arrow).

#### Immunohistochemistry (Paraffin-embedded Sections)

**Image 3.** Forlin-fixed and paraffin-embedded hun breast carcino tissue reacted with PK1 Antibody (C-term) (ABIN1882175 and ABIN2841383), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry, clinical relevance has not been evaluated.
