U	V	er	V	Ie	W

Quantity:	100 tests
Target:	TNFRSF8
Reactivity:	Human
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This TNFRSF8 antibody is conjugated to PE
Application:	Flow Cytometry (FACS)

Droduct Dataile

Product Details	
Immunogen:	Expression vector containing CD30 cDNA (booster suspension of THP-1 cell line)
Clone:	MEM-268
Isotype:	IgG
Specificity:	The antibody MEM-268 recognizes extracellular part of CD30 (Ki-1 antigen), a 105 kDa single chain glycoprotein expressed on Hodgkin's and Reed-Sternberg cells, it is also found in Burkitt's lymphomas, virus-infected T and B lymphocytes, and on normal B and T lymphocytes after activation (T lymphocytes that produce Th2-type cytokines and on CD4+/CD8+ T lymphocytes that co-express CD45RO and the IL4 receptor).
Cross-Reactivity (Details):	Human
Purification:	Purified antibody is conjugated with R-phycoerythrin (PE) under optimum conditions. Unconjugated antibody and free fluorochrome are removed by size-exclusion chromatography.

Target Details

Target:	TNFRSF8
Alternative Name:	CD30 (TNFRSF8 Products)
Background:	TNF receptor superfamily member 8,CD30 is a type I transmembrane glycoprotein of the TNF
	receptor superfamily. CD30 was originally identified as a cell surface antigen of Hodgkins and
	Reed-Sternberg cells using monoclonal antibody Ki-1. The ligand for CD30 is CD30L (CD153).
	The binding of CD30 to CD30L mediates pleiotropic effects including cell proliferation,
	activation, differentiation, and apoptotic cell death. CD30 has a critical role in the
	pathophysiology of Hodgkin's disease and other CD30+ lymphomas. CD30 acts as a
	costimulatory molecule in thymic negative selection. In addition to its expression on Hodgkin's
	and Reed-Sternberg cells, CD30 is also found in some non-Hodgkin's lymphomas (including
	Burkitt's lymphomas), virus-infected T and B cells, and on normal T and B cells after activation.
	In T cells, CD30 expression is present on a subset of T cells that produce Th2-type cytokines
	and on CD4+/CD8+ thymocytes that co-express CD45RO and the IL4 receptor. Soluble form of
	CD30 (sCD30) serves as a marker reflecting Th2 immune response.,Ki-1, TNFRSF8, CD30L
	receptor, D1S166E
Gene ID:	943
UniProt:	P28908
UniProt: Application Details	P28908
	P28908 Flow cytometry: The reagent is designed for analysis of human blood cells using 20 μL reagent
Application Details	
Application Details	Flow cytometry: The reagent is designed for analysis of human blood cells using 20 µL reagent
Application Details	Flow cytometry: The reagent is designed for analysis of human blood cells using 20 µL reagent / 100 µL of whole blood or 10 ⁶ cells in a suspension. The content of a vial (2 ml) is sufficient for
Application Details Application Notes:	Flow cytometry: The reagent is designed for analysis of human blood cells using 20 μ L reagent / 100 μ L of whole blood or 10 ⁶ cells in a suspension. The content of a vial (2 ml) is sufficient for 100 tests.

Handling

	should be handled by trained staff only.
Handling Advice:	Do not freeze. Avoid prolonged exposure to light.
Storage:	4 °C
Storage Comment:	Store at 2-8°C. Protect from prolonged exposure to light. Do not freeze.
