#### Application Details

Reagent Preparation:

1. Bring all reagents and samples to room temperature (18 - 25 °C) before use. 2. Item E, Assay Diluent should be diluted 5-fold with deionized or distilled water before use. 3. Preparation of Positive Control: Briefly spin the Positive Control vial of Item K. Add 250 µL 1x Assay Diluent (Item E, Assay Diluent should be diluted 5-fold with deionized or distilled water before use) into Item K vial to prepare a Positive Control Stock Solution. Dissolve the powder thoroughly by a gentle mix. Add 150 µL prepared Positive Control Stock Solution from the vial of Item K, into a tube with 300 µL 1x Assay Diluent to prepare P-1 (See i. Positive control of part IX. TYPICAL DATA for a typical result). Pipette 300 µL 1x Assay Diluent into each tube. Transfer 150 µL prepared P-1 into a tube with 300 µL 1x Asaay Diluent to produce a dilution series (shown below). Mix each tube thoroughly before the next transfer. 1x Assay Diluent serves as the background. If the Wash Concentrate (20x) (Item B) contains visible crystals, warm to room temperature and mix gently until dissolved. Dilute 20 mL of Wash Buffer Concentrate into deionized or distilled water to yield 400 mL of 1x Wash Buffer. 5. Briefly spin the biotinylated antibody (Item C) before use. Add 100 µL of 1x Assay Diluent into the vial to prepare a biotinylated anti- phosphotyrosine antibody concentrate. Pipette up and down to mix gently (the concentrate can be stored at 4 °C for 5 days or at -80 °C for one month). The biotinylated phosphotyrosine antibody should be diluted 80x with 1x Assay Diluent and used in step 4 of Part VII Assay Procedure. 6. Briefly spin the HRP-Streptavidin concentrate vial (Item G) and pipette up and down to mix gently before use. HRP-Streptavidin concentrate should be diluted 600 fold with 1x Assay Diluent. For example: Briefly spin the vial (Item G) and pipette up and down to mix gently. Add 20 µL of HRP-Streptavidin concentrate into a tube with 12 mL 1x Assay Diluent to prepare a 600-fold diluted HRP Streptavidin solution (don't store the diluted solution for next day use). Mix well.

 Cell Lysate Buffer should be diluted 2-fold with deionized or distilled water before use (recommend to add protease and phosphatase inhibitors). Phospho-EphB2 ELISA Kit Protocol 7 VII.

Sample Preparation:Cell lysates - Rinse cells with PBS, making sure to remove any remaining PBS before adding<br/>lysis buffer. Solubilize cells at 4 x 10 7 cells/mL in 1x Lysis Buffer (we recommend adding<br/>protease and phosphatase inhibitors to lysis buffer prior to sample preparation). Pipette up and<br/>down to resuspend and incubate the lysates with shaking at 2 - 8° C for 30 minutes.<br/>microcentrifuge at 13,000 rpm for 10 minutes at 2 - 8° C, and transfer the supernates into a<br/>clean test tube. Lysates should be used immediately or aliquoted and stored at -70 °C. Avoid

	repeated freeze-thaw cycles. Thawed lysates should be kept on ice prior to use.			
	For the initial experiment, we recommend to do a serial dilution testing such as 5-fold and 100-			
	fold dilution for your cell lysates with Assay Diluent (Item E) before use.			
	Note: The fold dilution of sample used depends on the abundance of phosphorylated proteins			
	and should be determined empirically. More of the sample can be used if signals are too weak.			
	If signals are too strong, the sample can be diluted further.			
	Cell lysate buffer should be diluted 2-fold with deionized or distilled water before use

Assay Procedure:	1. Bring all reagents to room temperature (18 - 25 °C) before use. It is recommended that all			
	samples or Positive Control should be run at least in duplicate.			
	2. Add 100 $\mu L$ of each sample or positive control into appropriate wells. Cover well with plate			
	holder and incubate for 2.5 hours at room temperature or over night at 4 °C with shaking.			
	3. Discard the solution and wash 4 times with 1x Wash Solution. Wash by filling each well with			
	Wash Buffer (300 $\mu$ L) using a multi-channel pipette or autowasher. Complete removal of liquid			
	at each step is essential to good performance. After the last wash, remove any remaining Wash			
	Buffer by aspirating or decanting. Invert the plate and blot it against clean paper towels.			
	4. Add 100 µL of prepared 1X biotinylated anti-phosphotyrosine antibody (Reagent Preparation			
	step 5) to each well. Incubate for 1 hour at room temperature with shaking.			
	5. Discard the solution. Repeat the wash as in step3.			
	6. Add 100 $\mu$ L of prepared 1X HRP-Streptavidin solution (see Reagent Preparation step 6) to			
	each well. Incubate for 45 minutes at room temperature with shaking.			
	7. Discard the solution. Repeat the wash as in step3.			
	8. Add 100 $\mu$ L of TMB One-Step Substrate Reagent (Item H) to each well. Incubate for 30			
	minutes at room temperature in the dark with shaking.			
	9. Add 50 $\mu$ L of Stop Solution (Item I) to each well. Read at 450 nm immediately. Phospho-
