Datasheet for ABIN1981830 ERK1/2 ELISA Kit

5 Images

10 Publications

Overview

| Quantity: | 96 tests |
|----------------------|------------------------------------|
| Target: | ERK1/2 (MAPK1/3) |
| Binding Specificity: | pThr185, pThr202, pTyr187, pTyr204 |
| Reactivity: | Human, Rat, Mouse |
| Method Type: | Cell ELISA |
| Application: | ELISA |

Product Details

| Purpose: | Cell-Based Human/Mouse/Rat ERK1/2 (Thr202/Tyr204) Phosphorylation ELISA Kit. Suitable for adherent whole cell lines. |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Brand: | CellBIND® |
| Sample Type: | Cell Culture Cells |
| Analytical Method: | Semi-Quantitative |
| Detection Method: | Colorimetric |
| Specificity: | The antibodies provided in this kit recognizes human, mouse and rat Erk1 phosphorylated at sites Thr202/Tyr204 and Erk2 phosphorylated at sites Thr185/Tyr187 and total Erk1/2 for comparison. |
| Characteristics: | Site and signal pathway-specific In vitro detection of adherent cell culture No sample lysis needed Compatible with a standard ELISA plate reader |

| | Faster results than with ELISAAdaptable for high-throughput screening and drug discovery |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Components: | uncoated 96-well Microplate Wash Buffer A Wash Buffer B Fixing Solution Quenching Buffer Blocking Buffer Anti-phospho antibody Anti-pan antibody HRP-Conjugated Secondary Antibody TMB One-Step Substrate Stop Solution |
| Material not included: | Distilled or deionized water 100 mL and 1 liter graduated cylinders Tubes to prepare sample dilutions Protease and Phosphatase inhibitors Precision pipettes to deliver 2 µL to 1 mL volumes Adjustable 1-25 mL pipettes for reagent preparation Benchtop rocker or shaker Microplate reader capable of measuring absorbance at 450 nm |

Target Details

| Target: | ERK1/2 (MAPK1/3) |
|-------------------|--------------------------------|
| Alternative Name: | Erk1 , Erk2 (MAPK1/3 Products) |
| Gene ID: | 5595, 5594 |
| UniProt: | P27361, P28482 |

Application Details

| Sample Volume: | 100 μL |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Plate: | Uncoated |
| Protocol: | Seed 10,000-30,000 cells into each well and incubate overnight. Apply various treatment, inhibitors or activators according to manufacture's instructions. Add 100 μL of Fixing Solution into each well and incubate for 20 min at RT with shaking. Add 200 μL of prepared 1X Quenching Buffer and incubate 20 min at RT. |

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/6 | Product datasheet for ABIN1981830 | 07/26/2024 | Copyright antibodies-online. All rights reserved.

| | 5. Add 200 μ L of Blocking Solution and incubate for 1 h at 37 °C. |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | Add 50 μL of 1X anti-phospho-protein specific antibody or anti-pan-protein specific antibody to each well and incubate for 2 h at RT. |
| | 7. Add 50 μ L of prepared 1X HRP-Anti-Rabbit or Mouse IgG and incubate for 1 h at RT. |
| | 8. Add 100 μ L of TMB One-Step Substrate Reagent to each well. |
| | 9. Incubate 30 min at RT. |
| | 10. Add 50 μ L of Stop Solution to each well. |
| | 11. Read at 450 nm immediately. |
| Reagent Preparation: | NOTE: Thaw all reagents to room temperature immediately before use. If wash buffers contain |
| | visible crystals, warm to room temperature and mix gently until dissolved. |
| | NOTE: Briefly centrifuge (~1,000g) ITEMS G, H, and I before opening to ensure maximum |
| | recovery. |
| | For more information look at the picture. |
| Assay Procedure: | NOTE: ALL incubations and wash steps must be performed under gentle rocking or rotation |
| | (~1-2 cycles/sec). |
| | 1. Design your experiment. For example, see Figure 2 below. |
| | OPTIONAL: If seeding HUVECs, HMEC-1 or other loosely attached cells, coat the Uncoated 96- |
| | Well Microplate (ITEM A) by adding 100 μL poly-L-Lysine (Recommended Sigma Aldrich) into |
| | each well and then follow manufacturer's instructions. A pre-coated CellBIND® microplate or |
| | other poly-lysine treated tissue culture plate may be used in place of Item A. |
| | 2. Seed 100 μL of 30,000 cells into each well of the Uncoated 96-Well Microplate (ITEM A) |
| | provided and incubate overnight at 37 °C with 5 % CO2. |
| | NOTE: The optimal cell number used will vary on the cell line and the relative amount of protei |
| | phosphorylation. More or less cells may be used but this must be determined empirically. |
| | NOTE: The cells can be starved \sim 4-24 hours (depending on cell line) prior to treatment with |
| | inhibitors or activators. |
| | 3. Apply various treatments, inhibitors (such as siRNA or chemicals) or activators according to |
| | manufacturer's instructions and incubate for the desired time points. |
| | NOTE: It is recommended to dissolve inhibitors or activators into serum-free cell culture |
| | medium before treating the cells (unless otherwise stated in the manufacturer's instructions.) |
| | 4. Discard the cell culture medium by flipping the microplate upside down and gently tapping |
| | the bottom of the microplate over a sink. |
| | 5. Wash by pipetting 200 μ L of the prepared 1X Wash Buffer A (ITEM B) into each well. Discard |
| | the wash buffer (same as step 4) and wash 2 more times for a total of 3 washes using fresh |
| | wash buffer each time. After the final wash, gently blot the microplate onto a paper towel to |
| | |

| | cells. Instead, gently dispense the liquid down the wall of cell culture wells. Also avoid the use of |
|------------------|---------------------------------------------------------------------------------------------------------|
| | vacuum suction or too forcefully tapping the microplate when discarding any solution. |
| | 6. Add 100 μL of Fixing Solution (ITEM D) into each well and incubate for 20 minutes at room |
| | temperature. |
| | NOTE: The fixing solution is used to permeabilize the cells. |
| | 7. Repeat wash step 5. |
| | 8. Add 200 μL of the prepared 1X Quenching Buffer (ITEM E) into each well and incubate 20 |
| | minutes at room temperature. |
| | NOTE: The quenching buffer is used to minimize the background response. 9. Wash 4 times |
| | with 1X Wash Buffer A. |
| | 10. Add 200 μ L of the prepared 1X Blocking Buffer (ITEM F) into each well and incubate for 1 |
| | hour at 37 °C. |
| | 11. Wash 3 times with the prepared 1X Wash Buffer B (ITEM C). NOTE: If needed, the |
| | microplate may be stored at -80 °C for several days after this wash. |
| | 12. Add 50 μL of the prepared 1X primary antibody (ITEM G or H) into each corresponding well |
| | and incubate for 2 hours at room temperature. |
| | 13. Wash 4 times with 1X Wash Buffer B. |
| | 14. Add 50 μL of 1X HRP Conjugated secondary antibody (ITEM I) into each well and incubate |
| | for 1 hour at room temperature. |
| | 15. Wash 4 times with 1X Wash Buffer B. |
| | 16. Add 100 μL of the TMB Substrate (ITEM J) into each well and incubate for 30 minutes at |
| | room temperature in the dark. |
| | 17. Add 50 μL of the Stop Solution (ITEM K) into each well. Read at 450 nm immediately. |
| Restrictions: | For Research Use only |
| Handling | |
| Handling Advice: | Avoid repeated freeze-thaw cycles. |
| Storage: | -20 °C |
| Storage Comment: | The entire kit may be stored at -20°C for up to 6 months from the date of shipment. Avoid |

Storage Comment:The entire kit may be stored at -20°C for up to 6 months from the date of shipment. Avoidrepeated freeze-thaw cycles.

Expiry Date:

6 months
