6 Publications

Overview

| Quantity: | 2 x 96 tests |
|----------------------|--|
| Target: | ERK1/2, JNK, p38 MAPK |
| Binding Specificity: | pThr180, pThr183, pThr185, pThr202, pTyr182, pTyr185, pTyr187, pTyr204 |
| Reactivity: | Human, Mouse, Rat |
| Method Type: | Cell ELISA |
| Application: | ELISA |
| Product Details | |
| Purpose: | Cell-Based Human/Mouse/Rat ERK1/2 (Thr202/Tyr204), JNK (Thr183/Tyr185), p38 MAPK |
| | (Thr180/Tyr182) Phosphorylation ELISA Kit. Suitable for adherent whole cell lines. |
| Brand: | CellBIND® |
| Sample Type: | Cell Culture Cells |
| Analytical Method: | Semi-Quantitative |
| Detection Method: | Colorimetric |
| Specificity: | The antibodies provided in this kit recognizes human, mouse and rat Erk1 phosphorylated at |
| | sites Thr202/Tyr204, Erk2 phosphorylated at sites Thr185/Tyr187, JNK phosphorylated at sites |
| | Thr183/Tyr185 and p38 phosphorylated at sites Thr180/Tyr182. This kit also recognizes total |
| | Erk1/2, total JNK and total p38 for comparison. |
| Characteristics: | Site and signal pathway-specific |

- In vitro detection of adherent cell culture
- No sample lysis needed

| | Compatible with a standard ELISA plate reader Faster results than with ELISA Adaptable for high-throughput screening and drug discovery |
|------------------------|---|
| Components: | uncoated 96-well Microplate Wash Buffer A Wash Buffer B Fixing Solution Quenching Buffer Blocking Buffer Anti-phospho antibodies Anti-pan antibodies HRP-Conjugated Secondary Antibody TMB One-Step Substrate Stop Solution |
| Material not included: | Distilled or deionized water 100 mL and 1 liter graduated cylinders Tubes to prepare sample dilutions Protease and Phosphatase inhibitors Precision pipettes to deliver 2 µL to 1 mL volumes Adjustable 1-25 mL pipettes for reagent preparation Benchtop rocker or shaker Microplate reader capable of measuring absorbance at 450 nm |

Target Details

| Target: | ERK1/2, JNK, p38 MAPK |
|----------|--------------------------------|
| UniProt: | P27361, P28482, P45983, Q16539 |

Application Details

| Plate: | Uncoated |
|-----------|--|
| Protocol: | 1. Seed 10,000-30,000 cells into each well and incubate overnight. |
| | 2. Apply various treatment, inhibitors or activators according to manufacture's instructions. |
| | 3. Add 100 μ L of Fixing Solution into each well and incubate for 20 min at RT with shaking. |
| | 4. Add 200 μ L of prepared 1X Quenching Buffer and incubate 20 min at RT. |
| | 5. Add 200 μL of Blocking Solution and incubate for 1 h at 37 °C. |
| | 6. Add 50 μL of 1X anti-phospho-protein specific antibody or anti-pan-protein specific antibody to each well and incubate for 2 h at RT. |
| | 7. Add 50 μL of prepared 1X HRP-Anti-Rabbit or Mouse IgG and incubate for 1 h at RT. |

| | 8. Add 100 μL of TMB One-Step Substrate Reagent to each well. |
|----------------------|--|
| | 9. Incubate 30 min at RT. |
| | 10. Add 50 μL of Stop Solution to each well. |
| | 11. Read at 450 nm immediately. |
| Reagent Preparation: | NOTE: Thaw all reagents to room temperature immediately before use. If wash buffers contain |
| | visible crystals, warm to room temperature and mix gently until dissolved. |
| | NOTE: Briefly centrifuge (~1,000g) ITEMS G, H, and I before opening to ensure maximum |
| | recovery. |
| | For more information look at the picture. |
| Assay Procedure: | NOTE: ALL incubations and wash steps must be performed under gentle rocking or rotation |
| | (~1-2 cycles/sec). |
| | 1. Design your experiment. For example, see Figure 2 below. |
| | OPTIONAL: If seeding HUVECs, HMEC-1 or other loosely attached cells, coat the Uncoated 96- |
| | Well Microplate (ITEM A) by adding 100 μ L poly-L-Lysine (Recommended Sigma Aldrich) into |
| | each well and then follow manufacturer's instructions. A pre-coated CellBIND® microplate or |
| | other poly-lysine treated tissue culture plate may be used in place of ITEM A. |
| | 2. Seed 100 μL of 10,000 to 30,000 cells into each well of the Uncoated 96- Well Microplate |
| | (ITEM A) provided and incubate overnight at 37 °C with 5 % CO2. |
| | NOTE: The optimal cell number used will vary on the cell line and the relative amount of protein |
| | phosphorylation. More or less cells may be used but this must be determined empirically. |
| | NOTE: The cells can be starved \sim 4-24 hours (depending on cell line) prior to treatment with |
| | inhibitors or activators. |
| | 3. Apply various treatments, inhibitors (such as siRNA or chemicals) or activators according to |
| | manufacturer's instructions and incubate for the desired time points. |
| | NOTE: It is recommended to dissolve inhibitors or activators into serum-free cell culture |
| | medium before treating the cells (unless otherwise stated in the manufacturer's instructions.) |
| | 4. Discard the cell culture medium by flipping the microplate upside down and gently tapping |
| | the bottom of the microplate over a sink. |
| | 5. Wash by pipetting 200 μ L of the prepared 1X Wash Buffer A (ITEM B) into each well. Discard |
| | the wash buffer (same as step 4) and wash 2 more times for a total of 3 washes using fresh |
| | wash buffer each time. After the final wash, gently blot the microplate onto a paper towel to |
| | remove any excess/remaining buffer. |
| | NOTE: To avoid cell loss, do not pipette directly onto the cells. Instead, gently dispense the |
| | liquid down the wall of cell culture wells. Also avoid the use of vacuum suction or too forcefully |
| | tapping the microplate when discarding any solution. |
| | |

| •• | |
|-------------------|--|
| | 6. Add 100 μL of Fixing Solution (ITEM D) into each well and incubate for 20 minutes at room |
| | temperature. |
| | NOTE: The fixing solution is used to permeabilize the cells. |
| | 7. Repeat wash step 5. |
| | 8. Add 200 μL of prepared 1X Quenching Buffer (ITEM E) into each well and incubate 20 |
| | minutes at room temperature. |
| | NOTE: The quenching buffer is used to minimize the background response. 9. Wash 4 times |
| | with 1X Wash Buffer A. |
| | 10. Add 200 μL of the prepared 1X Blocking Buffer (ITEM F) into each well and incubate for 1 hour at 37 °C. |
| | 11. Wash 3 times with the prepared 1X Wash Buffer B (ITEM C). |
| | NOTE: If needed, the microplate may be stored at -80 °C for several days after this wash. |
| | 12. Add 50 μL of the prepared 1X primary antibody (ITEM G-1, G-2, G-3, H- 1, H-2 or H-3) into |
| | each corresponding well and incubate for 2 hours at room temperature. |
| | 13. Wash 4 times with 1X Wash Buffer B. |
| | 14. Add 50 μL of the prepared 1X HRP Conjugated secondary antibody (ITEM I) into each well |
| | and incubate for 1 hour at room temperature. |
| | 15. Repeat step 13. |
| | 16. Add 100 μL of the TMB Substrate (ITEM J) into each well and incubate for 30 minutes at |
| | room temperature in the dark. |
| | 17. Add 50 μL of the Stop Solution (ITEM K) into each well. Read at 450 nm immediately. |
| Restrictions: | For Research Use only |
| Handling | |
| landling Advice: | Avoid repeated freeze-thaw cycles. |
| torage: | -20 °C |
| Storage Comment: | The entire kit may be stored at -20°C for up to 6 months from the date of shipment. Avoid |
| | repeated freeze-thaw cycles. |
| xpiry Date: | 6 months |
