# Datasheet for ABIN2039388 Vitamin B12 ELISA Kit

Image

#### Overview

Quantity:	96 tests
Target:	Vitamin B12
Reactivity:	Chemical
Detection Range:	1.56-100 pg/mL
Minimum Detection Limit:	1.56 pg/mL
Application:	ELISA

#### Product Details

Sample Type:	Serum, Plasma, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Cross-Reactivity (Details):	Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between the target antigen and all analogues for other species. Therefore, cross reaction may still exist.
Sensitivity:	0.39 pg/mL
Components:	<ul> <li>Assay plate (12 × 8 coated Microwells)</li> <li>Standard (freeze dried)</li> <li>Biotin-antibody (100 × concentrate)</li> <li>HRP-avidin (100 × concentrate)</li> <li>Biotin-antibody Diluent</li> <li>HRP-avidin Diluent</li> <li>Sample Diluent</li> </ul>

	• Wash Buffer (25 × concentrate)
	TMB Substrate
	Stop Solution
	Adhesive Strip (for 96 wells)
	Instruction manual
Material not included:	<ul> <li>Microplate reader capable of measuring absorbance at 450nm, with the correction wavelength set at 540nm or 570nm.</li> </ul>
	• An incubator which can provide stable incubation conditions up to $37^{\circ}C \pm 0.5^{\circ}C$ .
	Squirt bottle, manifold dispenser or automated microplate washer.
	Absorbent paper for blotting the microtiter plate.
	<ul> <li>100mL and 500mL graduated cylinders.</li> </ul>
	Deionized or distilled water.
	Pipettes and pipette tips.
	Test tubes for dilution.

## Target Details

Target:	Vitamin B12
Alternative Name:	Vitamin B12 (Vb12) (Vitamin B12 Products)
Target Type:	Chemical

### Application Details

Application Notes:	• The supplier is only responsible for the kit itself, but not for the samples consumed during the
	assay. The user should calculate the possible amount of the samples used in the whole test.
	Please reserve sufficient samples in advance.
	<ul> <li>Samples to be used within 5 days may be stored at 2-8°C, otherwise samples must be stored at -20°C (≤ 1 month) or -80°C (≤ 2 months) to avoid loss of bioactivity and contamination.</li> <li>Grossly hemolyzed samples are not suitable for use in this assay.</li> <li>If the samples are not indicated in the manual, a preliminary experiment to determine the validity of the kit is necessary.</li> <li>Please predict the concentration before assaying. If values for these are not within the range</li> </ul>
	of the standard curve, users must determine the optimal sample dilutions for their particular experiments.
	• Tissue or cell extraction samples prepared by chemical lysis buffer may cause unexpected ELISA results due to the impacts of certain chemicals.
	Owing to the possibility of mismatching between antigens from another resource and antibodies used in this supplier's kits (e.g., antibody targets conformational epitope rather than linear options) some native or recombinant proteins from other manufacturers may pain than linear options.
	than linear epitope), some native or recombinant proteins from other manufacturers may no be recognized by this supplier's products.

Application Details	
	<ul> <li>Influenced by factors including cell viability, cell number and cell sampling time, samples from cell culture supernatant may not be recognized by the kit.</li> <li>Fresh samples without long time storage are recommended for the test. Otherwise, protein degradation and denaturalization may occur in those samples and finally lead to wrong results.</li> </ul>
Comment:	Detection wavelength: 450 nm
	Information on standard material:
	Depending on the antigen to be detected, standards can be either native or recombinant
	protein. The recombinant proteins are being expressed in CHO cells in most cases. Please
	inquire for more information. The formulation of auxiliary material in the standard is considered
	proprietary information, however it does not contain any poisonous substance. Proclin 300
	(1:3000) is used as preservative.
	Information on reagents:
	In most cases the stop solution provided is 1 N H2SO4. The formulation of wash solution is
	proprietary information. None of the components contain (sodium) azide, thimerosal, 2-
	mercaptoethanol (2-ME) or any other poisonous materials. For the sandwich method kits, the
	sample diluent, antibody diluent, enzyme diluent and standard all contain BSA.
	Information on antibodies:
	The antibodies provided in different kits vary in regards to clonality and host. Some antibodies
	are affinity purified, some are Protein A
Assay Time:	1 - 4.5 h
Plate:	Pre-coated
Sample Collection:	<ul> <li>Serum: Use a serum separator tube (SST) and allow samples to clot for two hours at room temperature or overnight at 4 °C before centrifugation for 15 minutes at 1000 × g. Remove serum and assay immediately or aliquot and store samples at -20 °C or -80 °C. Avoid repeated freeze-thaw cycles.</li> <li>Plasma: Collect plasma using EDTA or heparin as an anticoagulant. Centrifuge for 15 minutes at 1000 × g at 2-8 °C within 30 minutes of collection. Assay immediately or aliquot and store samples at -20 °C or -80 °C.</li> </ul>
	Tierre Henry Pines 100 mentions with 1 DDC herromenias in 1ml of 1 DDC and

 Tissue Homogenates: Rinse 100 mg tissue with 1× PBS, homogenize in 1mL of 1× PBS and store overnight at -20 °C. After two freeze-thaw cycles to break the cell membranes, centrifuge the homogenates for 5 minutes at 5000 × g, 2-8 °C. Remove and assay the supernate immediately. Alternatively, aliquot and store samples at -20 °C or -80 °C.
