Target Details

Background:	<p>Synonyms: Claudin-10, Claudin10, CLD10_HUMAN, CLDN 10, CLDN10, CLDN10 protein, CPETRL 3, CPETRL3, HGNC:2033, OSP L, OSP like protein, OSP-like protein, OSPL.</p> <p>Background: The claudin superfamily consists of many structurally related proteins in humans. These proteins are important structural and functional components of tight junctions in paracellular transport. Claudins are located in both epithelial and endothelial cells in all tight junction-bearing tissues. Three classes of proteins are known to localize to tight junctions, including the claudins, Occludin and junction adhesion molecules. Claudins, which consist of four transmembrane domains and two extracellular loops, make up tight junction strands. Claudin expression is often highly restricted to specific regions of different tissues and may have an important role in transcellular transport through tight junctions. Claudin-10 is a 228 amino acid multi-pass membrane protein that belongs to the claudin family and plays an important role in cell-adhesion activity and tight junction-specific events.</p>
