#### Target Details

Background:	Synonyms: Claudin-10, Claudin10, CLD10_HUMAN, CLDN 10, CLDN10, CLDN10 protein,
	CPETRL 3, CPETRL3, HGNC:2033, OSP L, OSP like protein, OSP-like protein, OSPL.
	Background: The claudin superfamily consists of many structurally related proteins in humans.
	These proteins are important structural and functional components of tight junctions in
	paracellular transport. Claudins are located in both epithelial and endothelial cells in all tight
	junction-bearing tissues. Three classes of proteins are known to localize to tight junctions,
	including the claudins, Occludin and junction adhesion molecules. Claudins, which consist of
	four transmembrane domains and two extracellular loops, make up tight junction strands.
	Claudin expression is often highly restricted to specfic regions of different tissues and may
	have an important role in transcellular transport through tight junctions. Claudin-10 is a 228
	amino acid multi-pass membrane protein that belongs to the claudin family and plays an
	important role in cell-adhesion activity and tight junction-specific events.

Pathways:

Hepatitis C
