Target Details

Background:	Synonyms: 2310014B08Rik, Claudin23, CLDN 23, CLDN23, CLDNL.
	Background: The claudin superfamily consists of structurally related proteins that are important
	structural and functional components of tight junctions. Claudin-23, also known as CLDN23 or
	CLDNL, is a 292 amino acid multi-pass membrane protein that localizes to cell junctions and
	belongs to the claudin family. Expressed in stomach and placenta, as well as in germinal center
	B-cells, claudin-23 is thought to exhibit calcium-dependent cell-adhesion activity through which
	it plays an essential role in tight junction-specific obliteration of the intercellular space. Human
	claudin-23 shares 80 % sequence similarity with its mouse counterpart, suggesting a conserved
	role between species. Overexpression of claudin-23 is associated with colon tumors,
	implicating claudin-23 as a possible metastasis factor.

Pathways:

Cell-Cell Junction Organization, Hepatitis C
