DLP1 (CSRP2 Products)

Target Details	
Background:	Synonyms: Dynamin-1-like protein, Dnm1p/Vps1p-like protein, DVLP, Dynamin family member
	proline-rich carboxyl-terminal domain less, Dymple, Dynamin-like protein, Dynamin-like protein
	4, Dynamin-like protein IV, HdynIV, Dynamin-related protein 1, DNM1L, DLP1, DRP1
	Background: Functions in mitochondrial and peroxisomal division. Mediates membrane fission
	through oligomerization into membrane-associated tubular structures that wrap around the
	scission site to constrict and sever the mitochondrial membrane through a GTP hydrolysis-
	dependent mechanism. Through its function in mitochondrial division, ensures the survival of a
	least some types of postmitotic neurons, including Purkinje cells, by suppressing oxidative
	damage. Required for normal brain development, including that of cerebellum. Facilitates
	developmentally regulated apoptosis during neural tube formation. Required for a normal rate
	of cytochrome c release and caspase activation during apoptosis, this requirement may depen
	upon the cell type and the physiological apoptotic cues. Also required for mitochondrial fission
	during mitosis. Required for formation of endocytic vesicles. Proposed to regulate synaptic
	vesicle membrane dynamics through association with BCL2L1 isoform Bcl-X(L) which
	stimulates its GTPase activity in synaptic vesicles, the function may require its recruitment by
	MFF to clathrin-containing vesicles. Required for programmed necrosis execution. Isoform 1
	and isoform 4 inhibit peroxisomal division when overexpressed.
