Target Details	
	damage-inducible protein GADD34, Myeloid differentiation primary response protein MyD116 homolog, PPP1R15A Background: Recruits the serine/threonine-protein phosphatase PP1 to dephosphorylate the
	translation initiation factor eIF-2A/EIF2S1, thereby reversing the shut-off of protein synthesis
	initiated by stress-inducible kinases and facilitating recovery of cells from stress. Down-
	regulates the TGF-beta signaling pathway by promoting dephosphorylation of TGFB1 by PP1.
	May promote apoptosis by inducing TP53 phosphorylation on 'Ser-15'.
