| Abstract: | IgG Products |
| Target Type: | Antibody |
| Background: | Immunoglobulin G (IgG), is one of the most abundant proteins in serum with normal levels |
| | between 8-17 mg/mL in adult blood. IgG is important for our defence against microorganisms |
| | and the molecules are produced by B lymphocytes as a part of our adaptive immune response. |
| | The IgG molecule has two separate functions, to bind to the pathogen that elicited the response |

The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 1011 variants.
