Abstract:	IgG Products
Target Type:	Antibody
Background:	Immunoglobulin G (IgG), is one of the most abundant proteins in serum with normal levels
	between 8-17 mg/mL in adult blood. IgG is important for our defence against microorganisms

	The IgG molecule has two separate functions, to bind to the pathogen that elicited the response

The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 1011 variants.
