Target Details

	activating protein 1, NF-kappa-B-activating protein 1, NFkB activating protein 1, TAB-3, TAB3, TAB3_HUMAN, TAK1 binding protein 3, TAK1-binding protein 3, TGF-beta-activated kinase 1 and MAP3K7-binding protein 3, TGF-beta-activated kinase 1-binding protein 3. Background: The product of this gene functions in the NF-kappaB signal transduction pathway. The encoded protein, and the similar and functionally redundant protein MAP3K7IP2/TAB2, forms a ternary complex with the protein kinase MAP3K7/TAK1 and either TRAF2 or TRAF6 in response to stimulation with the pro-inflammatory cytokines TNF or IL-1. Subsequent MAP3K7/TAK1 kinase activity triggers a signaling cascade leading to activation of the NF-kappaB transcription factor. The human genome contains a related pseudogene. Alternatively spliced transcript variants have been described, but their biological validity has not been determined.
