

## Datasheet for ABIN2373362 **anti-Tenascin N antibody**

[Go to Product page](#)

### Overview

|              |                                                                              |
|--------------|------------------------------------------------------------------------------|
| Quantity:    | 100 µg                                                                       |
| Target:      | Tenascin N (TNN)                                                             |
| Reactivity:  | Human                                                                        |
| Host:        | Mouse                                                                        |
| Clonality:   | Monoclonal                                                                   |
| Conjugate:   | This Tenascin N antibody is un-conjugated                                    |
| Application: | Immunohistochemistry (IHC), Western Blotting (WB), Immunochromatography (IC) |

### Product Details

|                             |                                 |
|-----------------------------|---------------------------------|
| Immunogen:                  | Human tenascin.                 |
| Clone:                      | T20                             |
| Isotype:                    | IgG1                            |
| Cross-Reactivity:           | Human                           |
| Cross-Reactivity (Details): | Calculated cross reactivity: Hu |
| Characteristics:            | Tenascin N                      |

### Target Details

|                   |                                             |
|-------------------|---------------------------------------------|
| Target:           | Tenascin N (TNN)                            |
| Alternative Name: | Tenascin N ( <a href="#">TNN Products</a> ) |
| Pathways:         | <a href="#">ACE Inhibitor Pathway</a>       |

Application Details

|                    |                                                                      |
|--------------------|----------------------------------------------------------------------|
| Application Notes: | Optimal working conditions should be determined by the investigator. |
| Restrictions:      | For Research Use only                                                |

Handling

|                  |                                                                                                                            |
|------------------|----------------------------------------------------------------------------------------------------------------------------|
| Format:          | Lyophilized                                                                                                                |
| Reconstitution:  | Reconstitution: 1.2 % sodium acetate or neutral PBS. If 1 mL of PBS is used, the antibody concentration will be 100 µg/mL. |
| Buffer:          | Ascites, Supplied as a lyophilized powder.                                                                                 |
| Storage:         | 4 °C,-20 °C                                                                                                                |
| Storage Comment: | 4°C/-20°C                                                                                                                  |
