Datasheet for ABIN2472102 ICAM1 ELISA Kit

Image

### Overview

| Quantity:                | 96 tests       |
|--------------------------|----------------|
| Target:                  | ICAM1          |
| Binding Specificity:     | Soluble        |
| Reactivity:              | Mouse          |
| Method Type:             | Sandwich ELISA |
| Detection Range:         | 125-8000 pg/mL |
| Minimum Detection Limit: | 125 pg/mL      |
| Application:             | ELISA          |

# Product Details

| Purpose:               | This assay employs the quantitative sandwich enzyme immunoassay technique for quantitative detection.            |
|------------------------|--|
| Sample Type:           | Serum, Plasma, Cell Culture Supernatant  |
| Analytical Method:     | Quantitative   |
| Detection Method:      | Colorimetric   |
| Specificity:           | SICAM-1 / CD54, Mouse  |
| Sensitivity:           | 1.27 pg/mL   |
| Components:            | Plate, Standard, Diluent   |
| Material not included: | Microplate reader capable of measuring absorbance at 450 nm, with correction wavelength set at 570 nm or 630 nm. |

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 1/4 | Product datasheet for ABIN2472102 | 09/11/2023 | Copyright antibodies-online. All rights reserved. Pipettes and pipette tips.

50  $\mu$ L to 300  $\mu$ L adjustable multichannel micropipette with disposable tips.

Multichannel micropipette reservoir.

Beakers, flasks, cylinders necessary for preparation of reagents.

Deionized or distilled water.

Polypropylene test tubes for dilution.

# Target Details

| Target:           | ICAM1   |
|-------------------|---|
| Alternative Name: | ICAM-1/CD54 (ICAM1 Products)  |
| Target Type:      | Viral Protein   |
| Background:       | Intercellular Adhesion Molecule 1 (ICAM-1), also known as CD54, is a nearly ubiquitous<br>transmembrane glycoprotein which is typically expressed on endothelial cells and cells of the<br>immune system and plays a key role in leukocyte migration and activation. It binds to integrins<br>of type CD11a/CD18, or CD11b/CD18 and is also exploited by rhinovirus as a receptor. Soluble<br>ICAM-1 (sICAM-1) promotes angiogenesis and serves as an indicator of vascular endothelial<br>cell activation or damage. |
| Gene ID:          | 15894   |
| NCBI Accession:   | NM_010493   |
| UniProt:          | P13597  |
| Pathways:         | Cellular Response to Molecule of Bacterial Origin, Regulation of Actin Filament Polymerization,<br>Carbohydrate Homeostasis, Regulation of Leukocyte Mediated Immunity, Thromboxane A2<br>Receptor Signaling  |

#### **Application Details**

| Sample Volume: | 100 µL                |
|----------------|-----------------------|
| Assay Time:    | 3 - 4 h               |
| Plate:         | Pre-coated            |
| Restrictions:  | For Research Use only |

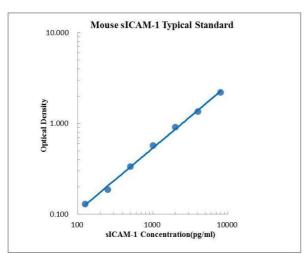

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/4 | Product datasheet for ABIN2472102 | 09/11/2023 | Copyright antibodies-online. | Buffer:            | Buffer contains: 0.02 % sodium azide   |
|--------------------|--|
| Preservative:      | Sodium azide   |
| Precaution of Use: | This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which                    |
|                    | should be handled by trained staff only.   |
| Handling Advice:   | Intended for research use only and are not for use in diagnostic or therapeutic procedures.      |
|                    | Treat all chemicals with caution because they can be potentially hazardous.                      |
|                    | It is recommended that this product is handled only by persons who have been trained in          |
|                    | laboratory techniques and in accordance with the principles of good laboratory practice. Wear    |
|                    | personal protection equipment such as laboratory coat, safety glasses and gloves.                |
|                    | Avoid direct contact with skin or eyes. Wash immediately with water in the case of contact with  |
|                    | skin or eyes. Avoid contact of skin or mucous membranes with kit reagents or specimens. See      |
|                    | material safety data sheet(s) for specific advice.   |
|                    | Pure water or deionized water must be used for reagent preparation.                              |
|                    | The Stop Solution provided with this kit is an acid solution. Wear personal protection equipmer  |
|                    | with caution.  |
|                    | Do not expose kit reagents to strong light during storage and incubation.                        |
|                    | Rubber or disposable latex gloves should be worn while handling kit reagents or specimens.       |
|                    | Avoid contact of substrate solution with oxidizing agents and metal.                             |
|                    | Avoid splashing or generation of aerosols.   |
|                    | Use disposable pipette tips and/or pipettes to avoid microbial or cross-contamination of         |
|                    | reagents or specimens which may invalidate the test.   |
|                    | Use clean, dedicated reagent trays for dispensing the conjugate and substrate reagent.           |
|                    | Exposure to acid inactivates the HRP and antibody conjugate.                                     |
|                    | Substrate solution must be warmed to room temperature prior to use.                              |
|                    | Decontaminate and dispose specimens and all potentially contaminated materials as they           |
|                    | could contain infectious agents. The preferred method of decontamination is autoclaving for a    |
|                    | minimum of 1 hour at 121.5 °C.   |
|                    | Liquid wastes not containing acid and neutralized waste may be mixed with sodium                 |
|                    | hypochlorite in volumes such that the final mixture contains 1.0 % sodium hypochlorite. Allow    |
|                    | 30 minutes for effective decontamination. Liquid waste containing acid must be neutralized       |
|                    | prior to the addition of sodium hypochlorite.  |
|                    | All reagents including microplate, samples, standards and working solution should be warmed      |
|                    | to room temperature before use.  |
|                    | To obtain accurate results, using adhesive film to seal the plate during incubation is suggested |
|                    | It is recommended that all samples and standards be assayed in duplicate.                        |

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 3/4 | Product datasheet for ABIN2472102 | 09/11/2023 | Copyright antibodies-online. All rights reserved.

|                  | Avoid foaming when mixing or reconstituting solutions containing protein.                          |
|------------------|--|
|                  | To avoid cross-contamination, use separate reservoirs for each reagent and change pipette tip      |
|                  | between each standard, sample and reagent.   |
|                  | When using an automated plate washer, adding a 30 seconds soak period before washing step          |
|                  | and/or rotating the plate between wash steps may improve assay precision.                          |
|                  | When pipetting reagents, maintain a consistent order of addition from well-to-well.                |
|                  | Keep Substrate solution protected from direct strong light. Substrate Solution should turn to      |
|                  | gradations of blue after a proper color development.   |
|                  | Read absorbance within 30 minutes after adding stop solution.                                      |
|                  | Take care not to scratch the inner surface of the microwells.                                      |
| Storage:         | 4 °C   |
| Storage Comment: | Store kit reagents between 2 and 8 °C. Immediately after use remaining reagents should be          |
|                  | returned to cold storage (2 to 8 °C).  |
|                  | Expiry of the kit and reagents is stated on labels. Expiration date of the kit components can only |
|                  | be guaranteed if the components are stored properly, and if, in case of repeated use of one        |
|                  | component, this reagent is not contaminated by the first handling.                                 |
|                  | Unopened Kit: Store at 2 - 8 °C (See expiration date on the label).                                |
|                  | Opened/Reconstituted Reagents: Up to 1 month at 2 - 8 °C.  |
|                  | Reconstituted Standard: Up to 1 month at $\leq$ -20 °C in a manual defrost freezer. Avoid repeated |
|                  | freeze-thaw cycles.  |
|                  | Microplate Wells: Up to 1 month at 2 - 8 °C. Return unused strips to the foil pouch containing     |
|                  | the desiccant pack, reseal along entire edge to maintain plate integrity. Provided this is within  |
|                  | the expiration date of the kit   |
|                  |  |
