Target Details

	They share 30-33 % amino acid identity, mostly in the conserved ATP-binding domain (1).
	HSP110 cooperates with HSP70 in protein folding in the eukaryotic cytosol (2). In mammals,
	HSP110 is constitutively expressed, but exhibits particularly high levels in the brain. Both HSP70
	and HSP110 are elevated after cerebral ischemia. Recent studies demonstrate that the
	protective effects of HSP110 deficiency in cerebral ischemia may partly be mediated by an
	increase in the chaperone activity of HSP70 (3). Studies also suggest that HSP110 can be used
	in heat shock protein-based cancer immunotherapy (4).
