## **Target Details**

| Background:         | Brevican is the most abundant chondroitin sulfate proteoglycan in the extracellular matrix of    |  |  |
|---------------------|--|--|--|
|                     | the adult brain. It is a member of the lectican family of aggregating extracellular matrix       |  |  |
|                     | proteoglycans that bear chondroitin sulfate (CS) chains. It is highly expressed in the central   |  |  |
|                     | nervous system and is thought to stabilize synapses and inhibit neural plasticity. Brevican is   |  |  |
|                     | secreted from astrocytes and neurons as a 145 kD core protein that bears up to three,            |  |  |
|                     | covalently-linked, CS chains. It is also is secreted as a 145 kD core protein without CS chains. |  |  |
|                     | When cleaved by extracellular glutamyl endopeptidases, the ADAMTSs, a 55 kD N-terminal           |  |  |
|                     | fragment is formed that contains the unique C terminal epitope EAMESE.                           |  |  |

| Handling            |  |  |  |
| Format:             | Liquid   |  |  |
| Concentration:      | 1 mg/mL  |  |  |
| Buffer:             | PBS pH 7.4, 50 % glycerol, 0.09 % sodium azide, Storage buffer may change when conjugated        |  |  |
| Preservative:       | Sodium azide   |  |  |
| Precaution of Use:  | This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which                    |  |  |
|                     | should be handled by trained staff only.   |  |  |
| Storage:            | 4 °C   |  |  |
| Storage Comment:    | Conjugated antibodies should be stored at 4°C  |  |  |
