Alternative Name:	AMIGO1 (AMIGO1 Products)		
Background:	The amphoterin-induced gene and ORF (AMIGO) family of proteins consists of AMIGO1,		
g The state of the	AMIGO2 and AMIGO3. All three members are single pass type I membrane proteins that		
	contain several leucine-rich repeats, one IgG domain and a transmembrane domain. The		
	AMIGO proteins are specifically expressed on fiber tracts of neuronal tissues and participate in		
	their formation. They can form complexes with each other, but can also self-bind. AMIGO1, also		
	designated Alivin2, promotes growth and fasciculation of neurites and plays a role in		
	myelination and fasciculation of developing neural axons. In cerebellar neurons, AMIGO2		
	(Alivin1) is crucial for depolarization-dependent survival. Similar to AMIGO1 and AMIGO2,		
	AMIGO3 (Alivin3) plays a role in hemophilic and/or heterophilic cell-cell interaction and signal		
	transduction.		
Gene ID:	57463		
NCBI Accession:	NP_065754		
UniProt:	Q86WK6		
Application Details			
Application Notes:	• WB (1:1000)		
	optimal dilutions for assays should be determined by the user.		
Comment:	1 μg/ml of ABIN2483811 was sufficient for detection of AMIGO-1 in 20 μg of rat brain		
	membrane lysate and assayed by colorimetric immunoblot analysis using goat anti-mouse		
	IgG:HRP as the secondary antibody.
