Alternative Name:	AMIGO1 (AMIGO1 Products)
Background:	The amphoterin-induced gene and ORF (AMIGO) family of proteins consists of AMIGO1,
	AMIGO2 and AMIGO3. All three members are single pass type I membrane proteins that
	contain several leucine-rich repeats, one IgG domain and a transmembrane domain. The
	AMIGO proteins are specifically expressed on fiber tracts of neuronal tissues and participate in
	their formation. They can form complexes with each other, but can also self-bind. AMIGO1, also
	designated Alivin2, promotes growth and fasciculation of neurites and plays a role in
	myelination and fasciculation of developing neural axons. In cerebellar neurons, AMIGO2
	(Alivin1) is crucial for depolarization-dependent survival. Similar to AMIGO1 and AMIGO2,
	AMIGO3 (Alivin3) plays a role in hemophilic and/or heterophilic cell-cell interaction and signal
	transduction.
