Target Details	
Alternative Name:	Ankyrin R (ANK1 Products)
Background:	Ankyrins are a family of adaptor proteins that mediate the attachment of integral membrane proteins to the spectrin-actin based membrane skeleton (1). Ankyrins have binding sites for the beta subunit of spectrin and at least 12 families of integral membrane proteins. This linkage is required to maintain the integrity of the plasma membranes and to anchor specific ion channels, ion exchangers and ion transporters in the plasma membrane. Ankyrin R, or Ank1, was first discovered in erythrocyres, but has since also been located in the brain and muscles. Mutations are associated with hereditary spehrocytosis and alzheimer's diease (2).
Gene ID:	286
NCBI Accession:	NP_000028
UniProt:	P16157
Pathways:	Synaptic Membrane
Application Details	
Application Notes:	<ul><li>WB (1:1000)</li><li>optimal dilutions for assays should be determined by the user.</li></ul>
Comment:	A 1:100 dilution of ABIN2485525 was sufficient for detection of Ankyrin R in 20 µg of mouse brain lysate by ECL immunoblot analysis using Goat anti-mouse IgG:HRP as the secondary antibody.
