Alternative Name:	beta 4 Spectrin (SPTBN4 Products)
Background:	Spectrin is the major constituent of the cytoskeletal network underlying the erthrocyte plasma
	membrane and determines cell shape, arrangement of transmembrane proteins and
	organization of organelles. It is expressed at very low levels in many tissues, with the strongest
	expression in the cerebellum, spinal cord, stomach, pituitary gland, liver, pancreas, salivary
	gland, kidney, bladder and heart (1). Spectrin beta 4 is a non-erythrocyte member, and is
	expressed in the brain and pancreatic islets and localisted to the nuclear matrix, cytoplasmic
	vesicles and PML nuclear bodies. Beta4 spectrins are also essential for membrane stability and
	the molecular organization of the nodes of Ranvier (2).
Gene ID:	57731
NCBI Accession:	NP_066022
UniProt:	Q9H254
Pathways:	Sensory Perception of Sound, Regulation of Actin Filament Polymerization, Maintenance of
	Protein Location
Application Details	
Application Notes:	• WB (1:1000)
	<ul> <li>optimal dilutions for assays should be determined by the user.</li> </ul>
Comment:	A 1:100 dilution of ABIN2485679 was sufficient for detection of Beta 4 Spectrin in 20 $\mu g$ of
	mouse brain lysate by ECL immunoblot analysis using Goat anti-mouse IgG:HRP as the
	secondary antibody.
