during mitosis. The Centromere Protein-A, CENP-A, is a Histone H3-like protein that contains a
C-terminal H3-like domain, which is required for centromere localization of CENP-A, and an
antigenic N-terminal domain. CENP-A, originally isolated from HeLa cells, is essential for
kinetochore targeting of CENP-C. In the presence of DNA CENP-A forms an octa-meric complex
with histones H4, H2A, H2B. CENP-A specifically localizes to active centromeres and is a
component of specialized centromeric nucleosomes, on which kinetochores are assembled.
CENP-A is essential for nucleosomal packaging of centromeric DNA at interphase and
functions as a centromere formation marker on the chromosome.
